

“I’m a big fan of baitboats as they have caught me many big carp & pike over the years. Not only do they offer pinpoint rig and bait positioning, often essential when fishing tight under overhanging trees against islands or far margins, they eliminate any chance of overcasting and leaving tackle hung up - making them very ‘wildlife friendly’! Angling Technics have been at the forefront of baitboat development for the last 19+ years, not only with their baitboats but with “Graphic” echo sounder which allows you to see underwater features and more recently the ‘Navigator’ allowing precise repositioning of your bait any time, day or night....

My Microcat is essential in my quest to continue to catch big fish on many waters.....take it from me.....it will put more fish on the bank!”
